eating the
Next big thing

FERMENTED FAVA BEAN *)

In fermentation microbes produce enzymes that break down the nutrients, making the food more easily digested and utilized by the human body. It's also great for the stomach as fermented foods contain bacteria beneficial to gut flora.

Crushed tomatoes, tomato juice, water, fermented fava bean, broth powder (e.g., sunflower oil, maltodextrin, starch, modified starch, spices, acidity regulator [sodium diacetate]), onion, salt, sugar, tomato powder, spices (e.g., garlic, oregano, black pepper, basil), rapeseed oil, food colouring (caramel colour), sea salt.

MUU CHILI SIN CARNE 300G

Crushed tomato, tomato juice, water, fermented fava bean, kidney bean, broth powder (e.g., sunflower oil, starch, modified starch, spices, acidity regulator [sodium diacetate]), onion, spices (e.g., smoked paprika, cocoa, coriander, cumin, chili), brown sugar, tomato powder, corn maltodextrin, sea salt, rapeseed oil, food colouring (caramel colour), flavourings.

HEY THERE FOODIES!

Want to hear about a delicious ready meal that's full of flavor, quick to make, and sure to please? Of course you do! Introducing MUU Chili sin Carne - a vegan chili sauce with whole grain brown rice that heats up in a flash, feeds a hungry tummy, and is seriously scrumptious!

MUU TIKKA MASALA 500G

Rice: Water, wholegrain rice, salt. **Sauce:** Water, fermented fava bean, OAT drink [i.a. gluten free whole grain OAT, modified starches, emulsifier (E472e), antioxidant (sodium citrate)], rapeseed oil, spices (e.g., cardamom, coriander, ginger), sugar, corn maltodextrin, thickening agent (guar gum), modified starch, salt, sea salt, flavourings, emulsifier (sunflower lecithin).

MUU TIKKA MASALA 300G

Water, fermented fava bean, **oat** drink [i.a. gluten free whole grain **oat**, modified starches, emulsifier (E472e), antioxidant (sodium citrate)], rapeseed oil, spices (e.g., cardamom, coriander, ginger), sugar, corn maltodextrin, thickening agent (guar gum), modified starch, salt, sea salt, flavourings, emulsifier (sunflower lecithin).

MUU ready-made meal sauces are made with stomach friendly fermented fava beans. The flavorsome sauces take you on a journey around the world: curry flavors from India, spiciness from Thailand and warm tastes from Northern Africa.

Heat the sauce in a microwave, saucepan or water bath. Serve the sauce with noodles or rice and garnish with fresh herbs.

MUU CHILI SIN CARNE 500G

Rice: Water, wholegrain rice, salt. **Sauce:** Crushed tomato, tomato juice, water, fermented fava bean, kidney bean, broth powder (e.g., sunflower oil, starch, modified starch, spices, acidity regulator [sodium diacetate]), onion, spices (e.g., smoked paprika, cocoa, coriander, cumin, chili), brown sugar, tomato powder, corn maltodextrin, sea salt, rapeseed oil, food colouring (caramel colour), flavourings.

WANT TO SPICE UP YOUR MEALTIME WITH SOME HEARTY FLAVORS?

Look no further than MUU Tikka Masala - a ready-made meal that has a tasty Tikka Masala sauce made from stomach friendly and nutritious fermented fava beans and packs a punch of Indian-inspired spice. The lovable sauce comes with tasty whole grain brown rice! Whole grain brown rice - because life is too short for bland, white rice that's been stripped of its personality and nutrients.

MUU HOT DOG SAUSAGE 220G

Water, pea protein, rapeseed oil, salt, thickeners (methylcellulose, carrageenan, konjac), yeast extract, dextrose, spices, flavourings (e.g. smoke), food colouring (iron oxide). High salt content.

RAVIOLIS

MAMMA MIA

FRIDAY

Vegan meatball sub with MUU Meeat Balls

8 SUSTAINABILITY PROMISES BY MEEAT

1. MEEAT MAKES MOVING TO THE NEW ERA OF FOOD EASY, DELICIOUS AND HEALTHY!

It's simple: We can't keep eating meat the way we're used to. It's time for a change! Although change can be scary, we should not fight it, but embrace it. We believe that all of us will eat more plant-based food in the future – some more, others less. We have made it our mission to make this transition quick, easy and delicious!

2. WE ARE CONVERTING MEAT PROCESSING FACTORIES TO BE PLANT-BASED

We believe that the world already has enough factories – they are just not used for the right purposes. Permanent change comes from making existing resources serve future production. We are changing the world in a concrete way by making meat processing factories more suited for the next level of evolution. The same equipment that was used to process meat will increasingly be used to make plant-based food.

3. WE OFFER CHOICES THAT ARE GOOD FOR THE CLIMATE AND TALK ABOUT THEM IN AN UNDERSTANDABLE WAY

All of us, whether it's companies, governments or individuals, must do our part to fight the climate crisis. However, making choices that are truly good for the climate might still be challenging. There's lots of information, maybe even too much, and it might be difficult to find the correct and most important information from the flood. Different operators have different ways of calculating a product's carbon footprint, for example. We want to show you the carbon footprint of our products from farm to table in a way everyone can understand. Nobody has the time or energy to go through difficult lists of numbers: we want concrete information about carbon footprints! You can read more about the topic here.

4. WE CHOOSE THE BEST PACKAGING MATERIALS

We have to admit: even though our products have a small carbon footprint, most of it comes from packaging materials. Our packages are currently mostly plastic, but there's a good reason for it. At the moment, plastic packaging is the most product-safe choice, and it also the most efficient choice when it comes to the amount of necessary packaging material. We always choose packaging that is best for you, the environment and the product. It might be difficult to believe, but in this case, plastic is the best choice for the climate as well!

5. THE FOOD FOR CHANGE IS MADE WITH RENEWABLE ENERGY

Meeat's products are primarily made at a factory that runs on 100% wind power. When we start collaborating with a new factory, we always propose that the factory move to renewable energy. Our dream for the future is that all Meeat products will be produced with wind power and other forms of renewable energy. We're not just building a new world with food, but also with energy!

6. ITS SMART TO BE EFFICIENT WE DONT DRIVE HALF-EMPTY CARS

The stupidest thing that we can imagine is driving around the country in half-empty cars, taking piles of nothing from one city to another. For this reason, Meeat's products are transported around Finland in Tuoretie cars. Tuoretie is the country's largest logistics service provider. Since a large logistics company takes care of transport, we can efficiently move around lots of products. Tuoretie's cars already run on diesel and biogas. The use of biofuel cars will increase as new cars are purchased to replace the old ones.

7. WE ARE A RESPONSIBLE SOCIAL ACTOR

For us, sustainability also means taking responsibility for the people who work with us – our employees, customers and subcontractors. Meeat's products are primarily produced in a factory that is located around Kannus in Central Ostrobothnia, Finland. People have long, fulfilling careers at the factory. The factory is a significant employer in the region, but it previously functioned only as a meat production facility. The meat industry has been declining, but Meeat has brought work to the Kannus factory and made it livelier! Though it previously had dark prospects, Meeat has given new life to the factory. We are happy to participate in developing the region and promoting its well-being.

8. WE ARE CHANGING THE WORLD ONE MEAL AT A TIME

We at Meeat have an ambitious goal. We are going to challenge today's food production and its norms. We want to be the next step in the evolution of food, and we are inviting you to join us.

WE'RE HERE!
